WMO VCP Training Workshop on Use and Interpretation of NWP Model
3-7 December 2012

WMO RA II Pilot Project to develop support for NMHSs in numerical weather prediction (NWP)

Project Background

- Project Aims
 - To develop a consortium comprising NWP operators and product providers to support and assist NMHSs in their full use of NWP products
 - To foster development of NWP activities in provision of weather services, including forecasts and warnings.
- Steered by a Coordination Group comprising experts from participating Members, with experts of Hong Kong, China (HKO) and Republic of Korea (KMA) serving as coordinators.

Status

- A survey was conducted in 2010 and returns from 14 RA II Members were obtained on
 - use of NWP model products;
 - community NWP models;
 - knowledge exchange on NWP development and related training and research supports;
- Two community NWP models was selected:
 - Global and Regional Assimilation Prediction System (GRAPES) of the China Meteorological Administration (CMA);
 - Non-Hydrostatic Model (NHM) of the Japan Meteorological Agency (JMA)
- A web-based portal called the “Asian Consortium for NWP Forecasts” (ACNF) being developed by HKO

VCP Training Workshop on the Latest Development on Use and Interpretation of NWP Models

- Use and interpretation of global and regional NWP model outputs
- Model applications and post-processing techniques
- Introduction of ACNF web portal
- Community NWP models from ACNF
 - CMA GRAPES_Meso
 - JMA NHM
- Model downscaling experiments using the ACNF community models
- Sharing of experience from WMO Members
 - Friday p.m.

ACNF Web Portal

- on-line resources and information (need user's registration)
 - NWP products from RA II Members (HKO, KMA, CMA, and JMA)
 - NWP model prognostic charts
 - City-specific Numerical Weather Prediction (NWP) websites
 - EPS
 - severe weather guidance
- resources of community NWP model
 - source codes, case data, training materials
- Internet: to be announced

1. Introduction

This document describes the procedure to install, compile and perform test case simulation using the mesoscale version of CMA GRAPES, also known as GRAPES_MESO.

More information and real-time products of GRAPES_MESO from CMA can be accessed from this link:
<http://www.nmc.gov.cn/publish/nwp/grapes/>

2. Installation of GRAPES_MESO

(a) Hardware requirements of GRAPES_MESO

A minimum of 60 MB of disk space to uncompress, compile and execute GRAPES_MESO codes. The static or constant data require disk space of about 10 GB (440 MB in compressed format). Data volume of the testing case of GRAPES_MESO is about 2 GB.

(b) Software and Operating System Requirements

Linux or UNIX system with Fortran and C compilers, GrADS (<http://www.iges.org/grads/>) and MPI (Message Passing Interface) environment.

The required number of computation nodes and processors, and the disk volumes depend on the size of model coverage and model resolution.

(c) Methods to obtain the codes of GRAPES_MESO

On-line Discussion Forum

The screenshot shows a web browser window with multiple tabs. The active tab is titled "NHM Setup and Running - A x". The address bar shows the URL: <https://sites.google.com/site/acnfhko/jma-non-hydrostatic-model/nhm-setup-and-running>. The page header includes the title "NHM Setup and Running" with a timestamp "Updated Nov 25, 2012 1:36 AM" and a "Share" button. The main content area is titled "Asian Consortium of Numerical Forecasts" and features a navigation menu with links to "Home", "CMA-GRAPES", and "JMA-NHM". The "JMA-NHM" section is expanded, showing "NHM Setup and Running" as the selected topic. The forum interface includes a "Discussion Forum of NHM Setup" header, a "NEW TOPIC" button, and a search bar. A single topic is listed: "ACNF NHM Setup" with a "My membership" button. The topic content includes a welcome message and a list of tutorials.
